# ERG 911 L EASY / SMART

Medical couch ergometer in unique, innovative technology

## APPLICATION AREAS

The couch/semi-couch safety ergometers ERG 911 L were developed for use in the cardiology sector.

Special safety aspects require the use of a couch/semi-couch safety ergometer, e.g. patients with suspected problems of the cardiovascular system during exercise following a myocardial

infarction, after bypass surgery. The use of a couch/semi-couch safety ergometer is also recommended for the examination of elderly and disabled patients. Thanks to the optimal positioning of the patient on the lying surface, a performance identical to bike ergometry is achieved.

- ❖ complies with the European standard DIN EN 13405 and EDIN VDE 0750-238
- ❖ easy to operate

# ERG 911 LS EASY / SMART

Special ergometer for exercise echocardiography

## APPLICATION AREAS

The development of the ERG 911 LS is based on the technology of the ERG 911 L couch/semi-couch safety ergometers.

Thanks to an additional pivot axis of the couch, the patient can be positioned in an angle of up to 45 degrees to the left during exercise. This ensures a particularly favourable position for high-quality ultra-sound images during stress echocardiography. The stable shoulder support ensures a

comfortable and safe positioning of the patient while the couch is tilted to the left.

Apart from these special applications, the ergometer can of course still be used as a normal couch/semi-couch safety ergometer. Special safety aspects require the use of a couch/semi-couch safety ergometer, e.g. patients with suspected problems of

the cardiovascular system during exercise following a myocardial infarction, after bypass surgery, or special applications of exercise ergometry, e.g. cardiac catheter tests. The use of a ERG 911 LS couch/semi-couch ergometer is also recommended for the examination of elderly and handicapped patients.

❖ for echocardiography

❖ opening in the variable lying surface at heart level for convenient ultra-sound examinations

- ❖ infinitely rotatable by means of motor (0° - 45°)
- ❖ stable handlebar and shoulder rest for safe positioning of the patient when the couch is tilted
- ❖ stable steel tube construction for patients weighing up to 160 kg
