

# Master E-Sac

The fully automated  
Tissue Retrieval Sac

## DEPLOY

- using 5mm instruments

## POSITION

- using Espiner's unique introducer system

## RETRIEVE

- via laparoscopic incision reducing  
hospital stay, cost and complication

Safe and secure  
Closure with strong  
monofilament  
drawstring

One-piece tear  
resistant design with  
unique PUR coating  
for maximum strength  
and durability

Unique  
introducer  
system

## Master E-Sac Features:

-  Comprehensive solution covering all laparoscopic procedures including large spleen, ovary and kidney.
-  Minimally invasive reducing length of stay, financial strain and improved patient experience.
-  Our unique coated ripstop nylon is resistant to tearing if punctured.
-  Includes X-ray opaque marker.
-  Polyurethane coating impermeable to biological fluids.
-  Safe closure with strong monofilament drawstring.
-  Introducer system and arms permit external manipulation of the Sac for tissue capture.
-  Ergonomic and non-slip introducer system can be withdrawn from patient, leaving tissue securely contained until retrieval.
